

MEDICATION AT SCHOOL

Each school principal shall authorize two staff members to administer prescribed or over-the-counter oral or topical medication, eye drops, ear drops, or nasal spray (“medication”). Oral medications are administered by mouth either by swallowing or inhaling and may include administration by mask if the mask covers the mouth or mouth and nose. These designated staff members will participate in an inservice training session conducted by a physician or registered nurse prior to the opening of school each year or in accordance with the date of the order(s) and first administration of medication at school.

Prescribed or over-the-counter medication may be dispensed to students on a scheduled basis upon written authorization from a parent with a written request by a licensed health professional prescribing within the scope of their prescriptive authority. If the medication is to be administered more than 15 consecutive days the written request must be accompanied by written instructions from a licensed health professional. Requests will be valid for not more than the current school year. The prescribed or over-the-counter medication must be properly labeled and be contained in the original container. The dispenser of prescribed or non-prescribed medication will:

1. Collect the medication directly from the parent (normally a parent should transport the medication to and from school, students should not transport medication to school), and collect an authorization form properly signed by the parent and by the prescribing licensed health professional and collect instructions from the prescribing licensed health professional if the medication is to be administered for more than 15 consecutive days;
2. Store the prescription or non-prescribed medication (not more than a 20-day supply) in a locked, substantially constructed cabinet;
3. Maintain a daily record that indicates that the prescribed or non-prescribed medication was dispensed;
4. Provide for delegation, training and supervision by a physician or registered nurse.

A copy of this procedure and related policy shall be provided to the parent upon request for administration of medication in the schools.

Medications administered other than orally, topically, eye or ear drops, or nasal spray may only be administered by a registered nurse or licensed practical nurse. No prescribed medication shall be administered by injection by staff except when a student is susceptible to a predetermined, life-endangering situation. The parent shall submit a written statement which grants a staff member the authority to act according to the specific written orders and supporting directions provided by licensed health professional prescribing within his or her prescriptive authority (e.g., medication administered to counteract a reaction to a bee sting). Such medication shall be administered by staff trained by the supervising registered nurse to administer such an injection.

Written orders for emergency medication, signed and dated, from the licensed health professional prescribing within his or her prescriptive authority will:

1. State that the student suffers from an allergy, which may result in an anaphylactic reaction;
2. Identify the drug, the mode of administration and the dose. Epinephrine administered by inhalation, rather than injection, may be a treatment option. This decision must be made by the licensed health professional prescribing within his or her prescriptive authority;
3. Indicate when the injection shall be administered based on anticipated symptoms or time lapse from exposure to the allergen;
4. Recommend follow-up after administration which may include care of the stinger, administration of additional medications, transport to hospital; and
5. Specify how to report to the health professional prescribing within his or her prescriptive authority and any record keeping recommendations.

If a school nurse is on the premises, a nasal spray that is a legend drug or a controlled substance must be administered by the school nurse. If no school nurse is on the premises, a nasal spray that is a legend drug or a controlled substance may be administered by a designated school employee who is not a school nurse. After a school employee who is not a school nurse administers a nasal spray that is a legend drug or a controlled substance, the employee shall summon emergency medical assistance as soon as possible.

If a health professional and a student's parent request that a student be permitted to carry his or her own medication and/or be permitted to self-administer the medication, the principal may grant permission after consulting with the school nurse. The process for requesting and providing instructions shall be the same as established for oral medication, topical medication, eye drops, ear drops, or nasal spray. The principal and nurse shall take into account the age, maturity and capability of the student; the nature of the medication; the circumstances under which the student will or may have to self-administer the medication and other issues relevant in the specific case before authorizing a student to carry and/or self-administer medication at school. Except in the case of multi-dose devices (like asthma inhalers), students shall only carry one day's supply of medication at a time. Violations of any conditions placed on the student permitted to carry and/or self-administer his or her own medication may result in termination of that permission, as well as the imposition of discipline when appropriate.
